

Uniq-Supadek

the scaffold board solution for

Petrochemical industry

Few sectors of the economy experience more demanding conditions than the petrochemical industry. The need to maintain continuity of production by reducing risk and providing safe operating conditions in a demanding and hazardous environment is the challenge.

In common with many other areas of operations, the provision of temporary access in such conditions requires systems and products to be of the highest calibre in performance, durability and quality. Scaffold boards warrant special consideration; traditional timber scaffold boards may appear to do the job, but they can create a number of problems: Fire resistant treatments are only effective for a relatively short period of time; the presence of splinters can cause injuries; timber can deteriorate quickly, especially in harsh environments and timber soaks up water, making the boards slippery and considerably heavier when wet.

Uniq-Supadek
is the answer!

Available
with Class 1
fire resistance
to BS476

Manufactured from a recyclable polymer composite, Uniq-Supadek delivers a number of advantages and benefits that make it ideal for temporary access situations in petrochemical applications:-

- Flame retardant for the life of the product
- Resistant to oil, solvents, acids and salt water
- Will not rot, thereby assuring safety and durability
- Easy to clean and maintain
- Textured high grip surface provides sure footing
- No splinters to cause injuries
- Constant weight makes for easier handling
- Long working life offers excellent return on investment
